

SNA008, SNA013

To Suit Ford Transit 2.4 TDCi 2000 onwards.

SNA008 and SNA013 are Pad Mount starter motors fitted to Ford Transit 2.4 Litre Turbo Diesel Motors that utilize a Dual Mass Flywheel. The Dual mass flywheel, as it wears tends to “throw out” metal particles and dust that has an adverse effect on the way this starter operates by contaminating the two drive end shafts that are co-mounted parallel in the end housing.

These two shafts hold the Drive end pinion and clutch which once contaminated cannot move freely on their respective shafts and either, will not engage OR will not return from engagement with the ring gear. Both of these situations cause catastrophic damage to the internal components of the starter motor. As this is not a manufacturing defect it is not warrantable as a faulty starter.

It is recommended that during scheduled servicing the clutch is inspected and if showing any signs of wear should be replaced. Similarly if a starter motor is replaced that shows any signs of dust contamination then the Clutch should also be replaced and the flywheel housing thoroughly cleaned out before a new starter is fitted. Failure to do so will result in premature failure of the new starter and warranty will be void.

There is a Warning Sheet in the packaging with this Starter Motor to advise the fitter of this issue.
