

HMBB0400 Integrated Compact Ball Bank

- Provides accurate display of vehicle's roll
- Configurable warning and alarm levels
- Configurable sensor damping
- Sensitivity function allows user to set how sensitive the device is
- Multi-voltage compatible - 12 or 24 volt

NEW PRODUCT RELEASE INTEGRATED COMPACT BALL BANK

Hummingbird has released an Integrated Compact Ball Bank (part number HMBB0400). It is used to measure roll with the use of an integrated accelerometer.

It requires no costly installation and is operated by simply plugging into a cigarette adapter or directly connecting to power and ground.

It features a full colour screen allowing for easy interpretation of a roll angle of up to 20 degrees. It is multi-voltage and can work in 12 or 24 volt vehicles.

It requires no external sensor and can update roll measurements ten times a second.

In-built warning and alarm levels are configurable to a predetermined angle - when the roll exceeds this angle an alarm sounds and a visual warning appears on the display.

The Integrated Compact Ball Bank is designed and manufactured in Australia for Australian conditions.
