

THE POWER OF  
**REDARC**

# POWERDOCK

## NEW PRODUCT RELEASE

The PowerDock provides a secure way to transport the GoBlock in a vehicle, and the patented PowerDock design provides both restraint and connection with a single-action mechanism.

The PowerDock allows Green Power Priority, simultaneous vehicle and solar charging that will utilise all available solar power before supplementing with power from the vehicle when necessary. This reduces the load on your vehicle electrical system and ultimately increases fuel economy.

The PowerDock system has been tested to suit relevant crash and vibration standards, and is even lockable with a neat anti-theft feature.
