NEW PRODUCT RELEASE

Installing a BCDC is easier than ever with REDARC's new range of BCDC Wiring Kits, designed to connect a REDARC BCDC Battery Charger to the auxiliary and start battery in your vehicle.

Each kit contains the key items required to perform a new BCDC installation including pre-crimped, cut to length cables, fuses, fuse holders and connectors.

With a kit to suit most installation types, these universal kits are available in 6 different configurations depending on a mix of the auxiliary battery's location and maximum current rating of the charger.

Suitable for DIY installers or to streamline trade installations, the BCDC Wiring Kits take the guess work out of BCDC installations.
