#### State-of-the-art lighting technology

The Ultinon HID bulb is a High Intensity Discharge bulb filled with a mixture of special salts and gases including Xenon. The bulb has no filament unlike a halogen bulb which does have a filament (see Figure 1). The light arc is created between two electrodes (see Figure 2). As is the case with other gas discharge bulb, the Ultinon HID bulb has an electronic starter for quick ignition, and requires an electronic ballast to function properly.
