

SNJ570

Mitsuba Starter

Mitsubishi Style SNJ570

JAS have SNJ570, a starter motor that replaces the original Mitsuba Starter on many Honda 2.0 and 2.4 Litre Motors, please refer to the Ejas for full application.

This is a Mitsubishi style Starter that has a traditional solenoid instead of the internal type solenoid that the Mitsuba unit has and JAS has found it to be a robust starter for this application.

Fitment of SNJ570 is a simple procedure of moving the battery cable by 90Deg and potentially changing the solenoid activation wire by crimping a common 6.3mm blue push on terminal onto it.
