

Denso Style Universal Starters SNJ026 etc.

These Denso Style Universal Starters have a rotatable front housing to allow for flexible fitment options. The front housing is held on with 4 hex head Allen key bolts with 3 long and 1 short.

It is imperative that the short bolt is fitted in the original position or a longer bolt in this position will lock up the drive assembly and therefore the starter which will appear to be a short circuit in the starter.
