

TUNGSRAM™

Megalight Ultra +150

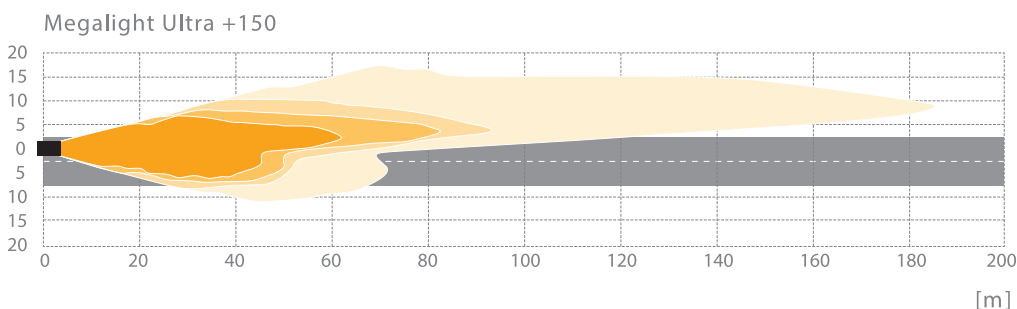

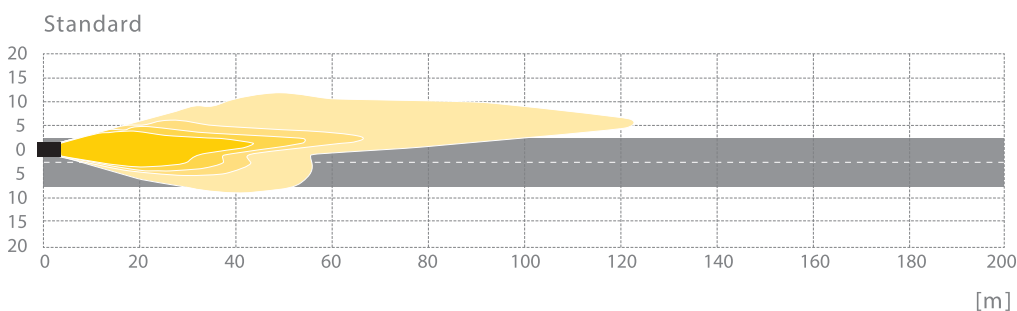

Maximum safety through ultimate performance

Expanding on their range of high quality halogen bulb upgrades, GE Tungsram have just launched the ultimate addition to the 'more light' category.

Megalight Ultra +150 bulbs set a new level in halogen headlight bulb performance, offering up to 150% more light on the road in the areas you need it, compared to a standard halogen bulb.

Not only does the Megalight Ultra +150 increase the viewable distance down the road but drastically improves visibility to the side of the road, something incredibly important when driving on dark roads to help avoid pedestrians, animals or road debris.

Approved for road use (ADR) and available in H4 and H7 bases, this new range of bulbs is unmatched in performance and price.
