NEW PRODUCT RELEASE Tow-Pro Elite Mounting Kit

REDARC have developed and released a range of products to support the fitment of the Tow-Pro Elite into the modern vehicle.

The latest release is the Tow-Pro Elite mounting bracket which simplifies the installation of the main unit under the dash of a vehicle. The bracket is designed to be fastened to the main unit with 2 x M4 bolts either at right angles, in line or diagonally across the main unit. The bracket then has an M6 slot and nut/bolt allowing connection to the vehicle on a suitable M6 stud or M6 hole.

The material of the bracket is rigid to support the main unit but can still be bent should the installation require it.

The range of REDARC Tow-Pro Elite fitting hardware, looms, diodes, Switch Inserts and now bracket, all ensure the installer can deliver a quality installation, every time.
