## **NEW** PRODUCT RELEASE

REDARC are pleased to announce the release of a range of new Monocrystalline Solar Blankets.

The new blankets are constructed from heavy duty canvas covered in an anti-reflective and scratch-resistant ethylene tetrafluoroethylene (ETFE) coating, making them extremely durable and perfect for off-road conditions.

Built-in bypass diodes connect each solar window to minimise the impact of shadows, ensuring maximum solar capture.

They're available in 160W, 240W & 300W power outputs and all feature genuine Anderson 50a connectors for plug 'n' play convenience.

Kits including a suitable regulator and Anderson cables are available for each power output.
