### FEATURES

- Designed, engineered and tested in Australia
- Market leading beam performance
- Market leading construction for unrivalled durability
- Unprecedented 10 year warranty
- Customisable look with Satin or Black bezel and interchangeable trim colours
- Complete control over the beam shape and output using the optional Connect+ Control Panel

# Ultima Light Bars

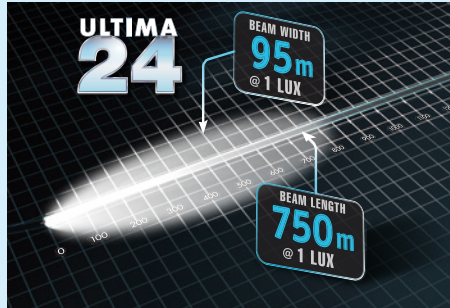

## Market Leading Performance

### Driving Beam Example

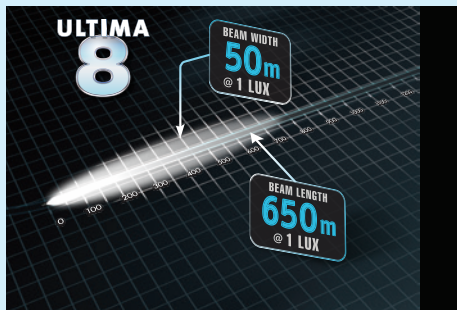

71720BK/71720S

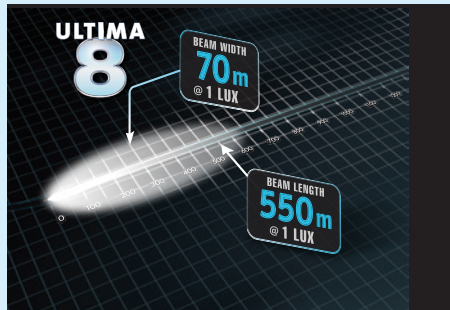

### Flood Beam Example

71725BK/71725S

71710BK (Pair)

71715BK (Pair)

Driving behind an Ultima light bar is like nothing you have ever experienced. The combination of precision optics, unique construction and high power LED's produce a truly market leading beam pattern.

The signature performance of the range is the combination of beam distance and beam width, with the 24 inch bar producing either 70m width at 600m (Long and Wide Hybrid Beam) or an incredible 95m at 500m (Ultra Wide Flood).

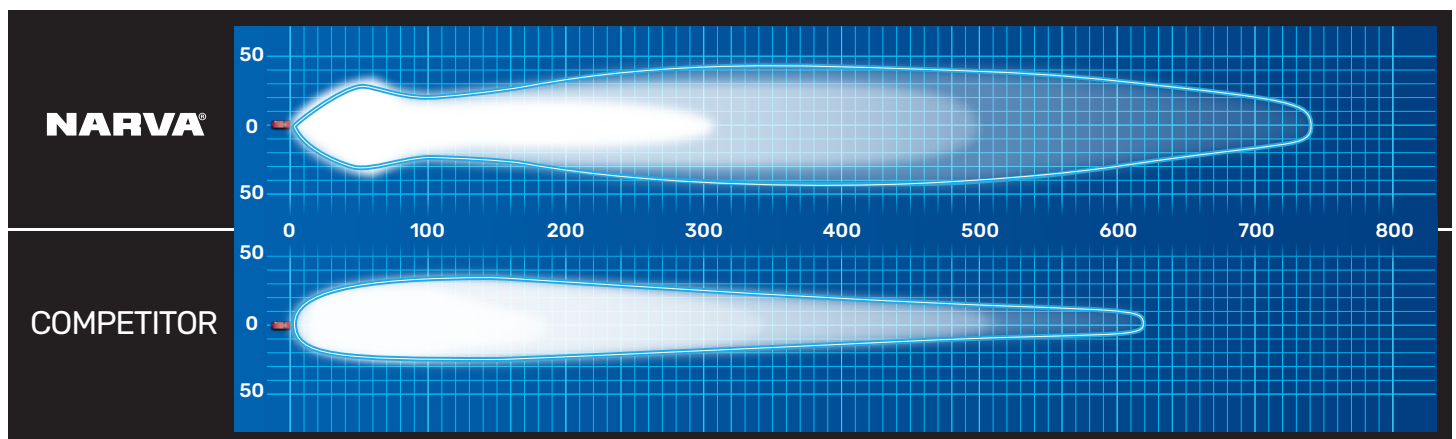

The beam pattern is also extremely smooth with no hot spots or dark spots which makes for easier driving.

The 24 inch bars also feature Narva's signature light pipe. The light pipe is ADR and ECE approved for front position and provides increased visibility to other road users as well as a signature look.

The 8 inch bars are the perfect compliment for the main 24 inch bar. Sold in pairs providing 13,200 effective lumens. Like the 24 inch models the 8 inch are also available in two beam patterns. Long and Wide Hybrid beam produces 50m of width at 450m with 1 lux out to 680m. Ultra Wide Flood beam produce 70m of width at 300m with 1 lux out to 500m.

Coming soon are another unique part of the range, the Ultima light bar joiner brackets are designed to either take a 24 inch bar and a pair of 8 inch bars to create a 40 inch light bar, or two 24 inch bars to make a 48 inch light bar. These systems are designed predominantly for mounting on the roof of a vehicle and when paired with the Connect+ controller make up a one of a kind, customizable lighting solution.

## Competitor Beam Comparison (24 Inch Ultra Wide Flood)

Area where beam is at least 1 Lux

## Market Leading Durability

The Ultima bars also take the legendary Ultima build quality to a new level. Utilising a single piece pressure die-cast aluminium housing the Ultima bars have the highest possible ingress protection IP68 and IP69K. Vertical fins and a Nitto breather vent on the back provides improved cooling, and with an integrated DT connector. Ultima light bars are engineered to endure the most heavy-duty conditions.

They also feature composite, glass filled nylon brackets which are lightweight and as strong as die-cast brackets with increased vibration resistance. The Ultima range has been passed both passenger and heavy vehicle vibration standards. Another benefit for the plastic bracket... it's corrosion resistant and rust proof (particularly from salt spray and galvanic corrosion).

UV resistant, hard coated polycarbonate lens and lens protector ensures no yellowing of the lens, protection against stone chips which means when maintained correctly the Ultima bars look just like they did the day they were installed for longer than any other light.

This allows Narva to provide an unprecedented 10 Year warranty.

Nitto Breather Vent

UV Resistant, Hard-coated Polycarbonate Lens and Lens Protector

Pressure Die-cast Aluminium Housing & Nitto Breather

Front Position Light Pipe

Interchangeable Colour Trims Included

Stealth Tinted Lens Protector Included

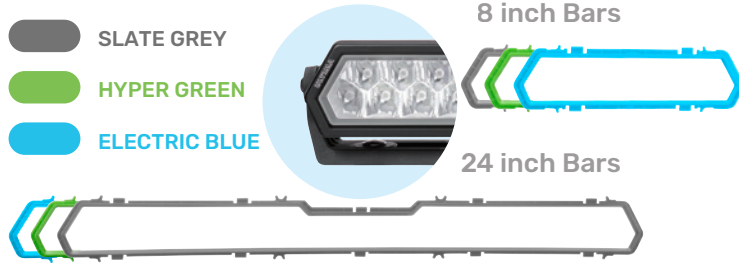

Lightweight Glass-filled Nylon Bracket

Integrated 4 Pin DT Connector
