

ANJ535, ANJ535HO and ANJ535GQ with Overrunning Clutch Pulleys to suit Nissan Navara and Pathfinder with YD25DDTI engines.

Overrunning Clutch Pulleys in general are a service item and JAS have noted potential issues with these vehicles that have developed over their service life that could cause the Alternator pulleys to either prematurely fail or even come off the Alternator altogether.

JAS Supplies these Alternators with OE quality Overrunning Clutch Pulleys to maximise service life.

To ensure that maximum service life is achieved please check all other components in the serpentine belt driveline such as all idler pulleys, belt tensioners, water pump and drive belt condition when replacing an Alternator or Clutch Pulley.
